QUANTUM
MINI SPINNER

The Quantum Mini Spinner is a new top-of-the-bag solution designed for golfers who need more spin, control, and confidence when attacking greens from distance. Engineered with a compact, deep profile and optimized for higher spin, it delivers the stopping power and precision players often struggle to achieve with traditional fairway woods or hybrids. Built to bridge the gap between woods and irons, it gives golfers the control they need to take aim and hold the green.

Optimized Spin Construction
A unique construction and spec package featuring a high center of gravity paired with an Ai-optimized high-spin face design. This combination promotes increased spin, enhanced stopping power, and tighter dispersion for more controlled approach shots.

Shorter Setup
Designed with a playing length that is 0.75" shorter than a traditional fairway wood, promoting more consistent impact and improved control through the hitting zone.

Deep Face Versatility
A taller face profile provides added confidence and versatility, offering more usable face area for improved contact—especially from the rough.

Step Sole Design
Refined specifically for the Mini Spinner, the Step Sole minimizes turf interaction to promote cleaner strikes and more consistent center-face contact.

Carbon Sole Construction (7W–9W)
A lightweight carbon sole allows mass to be repositioned higher in the head, raising the center of gravity to generate increased spin compared to a traditional high-lofted fairway wood—resulting in enhanced control and stopping power.
